

Facundo Goiriz

Lead GenAI Engineer

OpenAI, LLMs, RAG, Vector Databases, AI Agents, FastAPI, Async Python

English C1 | Spanish Native | Portuguese B2

facundogoiriz@gmail.com | LinkedIn: facundogoiriz | GitHub: fakamoto

Profile: Lead GenAI Engineer who ships production AI platforms from zero to reliable deployment, with hands-on ownership across OpenAI-based LLM systems, RAG, vector databases, AI agents, structured outputs, async orchestration, token budgets, prompt optimization, observability, and FastAPI backends.

EXPERIENCE

Lead GenAI Engineer - eCampus / Avatar4University (Konecta Labs) 06/2024 - 04/2026

Contractor project through Konecta Labs for an Italian university research initiative; built a production AI course and avatar platform from scratch.

- Designed high-volume **LLM** workflows where user requests chained hundreds of **OpenAI** model calls with **Structured Outputs**, **RAG**, **Vector Database** retrieval, and **AI Agents**.
- Built **AI Avatar**, video-generation, and voice workflows with **MuseTalk**, **Whisper**, and **Text-to-Speech**, transforming course content and user inputs into interactive learning experiences.
- Took the platform from architecture to production, covering **async** orchestration, persistence, request tracing, retries, failure handling, and deployment-ready backend services.
- Added production controls for **Token Budgets**, **Prompt Optimization**, token caching, observability, latency tracking, and quality monitoring.

AI Engineer & Team Lead - Network Ninja Inc 09/2023 - 05/2024

First AI hire at a 60-person US company; built the AI function from zero and later led two engineers as Tech Lead.

- Took AI applications from prototype to production with data pipelines, token/cost controls, latency, retries, and monitoring.
- Built production LLM systems with **OpenAI**, **function calling**, **structured outputs**, **embeddings**, vector databases, and **RAG** for chat, retrieval, and workflow automation.
- Orchestrated **AI agents** and multi-step workflows with **LangChain**, **LangGraph**, tool calling, memory/state, and human-in-the-loop patterns.
- Added observability and feedback loops for prompt iteration, latency tracking, failure analysis, and quality monitoring; worked with tooling such as **Langfuse**.
- Shipped computer-vision and multimodal features with **GPT Vision**, image-recognition pipelines, and custom **YOLO** models.

Mid Python Developer - Dyvenia 09/2022 - 09/2023

Polish data engineering company focused on backend and data systems for automation, analytics, and AI workflows.

- Built AI/data pipelines that converted raw user and product data into reliable datasets for automation, analytics, and model-driven workflows.
- Developed **FastAPI** REST APIs, data models, and processing services with **SQLAlchemy**, **SQLModel**, and **Docker** so internal data could power downstream AI programs.

Junior Python Developer - Cattler 07/2020 - 03/2022

Argentinian/US agtech company building software for livestock, pasture management, and satellite/GIS data workflows.

- Built **Django** and **Django REST Framework** APIs with **PostgreSQL** and **GCP** for livestock and pasture-management workflows.
- Used satellite/GIS data, image recognition, and machine learning models to support predictive pasture and grazing insights for livestock operations.

EDUCATION

UADE University, Data Science

2021 - 2021
